I have chosen to map the network of sugar travels. Sugar is a commodity that has a long history of global trade, dating back to ancient civilizations. The map of sugar's travels would show the origins of sugar production, the routes of trade, and the destinations of consumption. The map would reveal that sugar was first produced in the region of modern-day New Guinea, where it was then spread to other parts of the world through trade networks. The main routes of trade would be shown as going from the Caribbean, where sugar was grown on large plantations, to Europe and North America, where it was consumed in large quantities. The map would also show the role of colonial powers in the trade of sugar, as they established and controlled the production and trade of sugar in their colonies. Additionally, the map would reveal the impact of sugar on the economies and societies of the regions where it was produced, as well as the health impacts of its consumption. Overall, the map would provide a comprehensive understanding of the workings of the global sugar trade network.
