HIS 113: World Civilization 1 (OA)

Lesson 1

In the year 2020, the world sat still. No parties and social gatherings, cancel concerts and family celebrations, social distance, and remote learning. The new norm had arrived. Our lives are now forever change. Were we really prepared for it? How did this deadly virus arise? Will we forever be covid-free?

The covid virus also know as covid-19 is a respiratory infection that can cause illness in our bodies. People all over the world has died and got sick by the deadliest diseases. During the pandemic, all the world were forced to slow down its products and produce. According to the article of the U.S Department of Agriculture (USDA) in quote:” **The coronavirus (COVID-19) pandemic affected the U.S. economy including the farm sector and farm households. Farm businesses experienced disruptions to production because of lowered availability of labor and other inputs, and output prices were affected by changes in demand for commodities in certain market segments**”. The first cases of the covid-19 virus were identified in Wuhan, China. In December 2019- to the beginning Of January 2020 soon many cases of the virus began to infect numerous of people one by one and limited travel restrictions.

In the textbook *Frameworks of World History. Volume One*, history had its own chronic logical division. Diseases such as Arthritis and Leprosy had appear in the earliest human societies. Early signs of it has shown up in the skeletons of Homo Erectus and Neanderthals. The ice man suffered from Arthritis in parts of the body such as the knee, back and ankle. Adding agriculture to the societies, crested a major problem. Dieting due to poorer nutrition, infections began to arise higher in the society causing a lot of illnesses. When I read the chapter I thought of the quote how “History repeats itself” The same illnesses

that were known now has appeared in history before. Although the reports of death cases has declined since the global pandemic, there is still work that needs to be done.
