

Identify the eight keys of Policy frameworks.

Note the ways in which these elements are highly rational and systematic, and therefore somewhat incompatible with the political process through which policies are actually adopted.

The eight (8) keys of any policy frameworks are:

Policy frameworks systematically analyze a social policy or program.

Before I state the different element of any policy frameworks, after reading the research and information on Policy Frameworks; my insight of how politicians and manipulate, deceive, and coerce the masses/public into legalizing and de-legalizing a substance, whether alcohol, marijuana, slavery, gender/sexual life-style choice all for their political and financial gain.

And that is what I humbly think of the complex nature of Social Policies, especially in America, and Europe.

Policy frameworks reflect the understanding that social policy is context sensitive, and there are competing priorities in all policy options.

Policy frameworks employ rational methods of inquiry and analysis. The data used in policy analysis is derived from scientific inquiry and legitimate sources, and it is objectively interpreted and analysis.

The analytic method is explicit and all succeeding policy analyses should approximate the same conclusion.

Policy analysis is based on the commitment to derive the largest possible social and economic benefit at the least possible social cost. A good social policy one that benefits his or her own self-interest while at the same time hurting no one (a) variation of the Pareto Optimality.

Policy frameworks should attempt to take into account the unintended consequences of a particular policy or program. This could be added by constructing multiple policy models or scenarios.

Policy analyst should consider alternative social policies or alternative uses of present or future resources allocated to a given policy.

Policy frameworks should employ models that examine the potential impact of a policy (or a series of policies) on other social policies, social problems, and the public good.
