

**In this chapter, we see philosophers of the ancient world grappling with questions that we still wrestle with today. In this assignment, page 128, you will be giving your opinion rather than doing a lot of research.**

**How would you define your answers to questions about the nature of the cosmos, social order and individual ethics in today's world? These ideals still guide our societies and shape our frame values.**

**A good way to organize your response is to list the questions posed in the Axial Age (page 105). Then answer them in full as to their meaning in today's world. What do you base your responses on? - your religious faith? your political ideals? some of the founding documents of our nation? or is it your culture and traditions?**

**If you do any research, be sure to cite the web pages.**

The nature of the cosmos is a complex and ongoing subject of study and speculation, with different scientific and philosophical perspectives offering different interpretations. For example, from a scientific perspective, the nature of the cosmos can be understood through cosmology, which is the study of the origin, evolution, and structure of the universe. From a philosophical perspective, the nature of the cosmos may be understood through various religious, spiritual, or existential worldviews.

Social order refers to the way in which societies are organized and governed, and it is shaped by cultural, political, economic, and legal institutions. Today, social order is maintained through a complex web of laws, institutions, and norms, but it is also influenced by historical, cultural, and technological factors.

Individual ethics refers to the moral principles and values that guide individual behavior and decision-making. These principles can be shaped by various factors, including religious beliefs, cultural norms, personal experiences, and individual reasoning. In today's world,

individual ethics are influenced by a wide range of conflicting perspectives, including religious beliefs, cultural norms, political ideologies, and scientific understandings.

It is important to note that the nature of the cosmos, social order, and individual ethics are complex and multifaceted subjects, and different individuals and communities may hold different views and interpretations based on their own experiences and perspectives.

From my point of view, what was said above relates to everything. With religion, politics, cultural background, traditions...etc. In the end, each person has some thoughts and beliefs that grow from a cultural background that is different depending on where each person has grown up and with the people they surround themselves with.
