

Chapter 4: Frame Your World

1. What is the nature of the cosmos and the natural world?

What I believe is the nature of the cosmos and the natural world we see compared to prior mythological and otherworldly views of the world, they placed more emphasis on human initiative. Their profound effect permeated not only the writing of history but also all other intellectual endeavors, governing regimes, and the kind of persons regarded as deserving of authority. They established customs and enduring cognitive-linguistic metaphors that continue to influence how people view the world today. As a result, they offered one of the toolkits that would enable a new era of more powerful, more advanced empires. The new worlds they helped build would in turn influence and evolve them. In today's society, we see how all of us are connected by nature, culture, and religion.

2. What constitutes and justifies proper social order?

It is used in the discipline to describe how several interconnected aspects of society are organized. When people accept a shared social compact that stipulates that certain laws and rules must be followed as well as certain standards, values, and conventions be upheld, social order is present. Proper social order is necessary as an illustration, offering a sort of safety valve for those who for one reason or another could not fit into the rigorous boundaries of the social order, counseling people through dharma problems, setting basic tasks, etc. Politics is important because, despite the perception that it is demoralizing, it is a necessary component of governments that are king-ruled. However, for Indians, it wasn't the case because of the fundamentally spiritual nature of the Indian cultural frame, which meant that socially, culturally, and frequently even politically in informal ways.

3. What principles guide ethics, or individual decisions about right and wrong behavior?

The set of moral standards that shape a person's behavior is known as ethics. Social expectations, cultural norms, and religious influences all influence these moralities. What is right and wrong, just and unjust, and good and terrible in terms of human behavior are all beliefs that are reflected in ethics. They act as a compass to guide how individuals should act toward one another, comprehend and uphold their societal commitments, and conduct their lives. Ethics are thus the ideals that direct people's behavior in society. Morals continue to be the standards of conduct we use to determine what is right and wrong, even though they may change over time.
