Reading Questions 4

Regarding the nature of the cosmos, many people today believe in scientific explanations based on empirical evidence and logical reasoning. This understanding includes concepts such as the Big Bang theory, the laws of physics, and the theory of evolution.

In terms of social order, most societies today are guided by political, economic, legal, and cultural institutions that regulate behavior and promote social cohesion. These institutions include government, laws, markets, education, religion, and the media. There is also a growing recognition of the importance of diversity, equity, and inclusion in promoting social justice and reducing social inequality.

Individual ethics today are often based on a combination of personal values, cultural traditions, and legal and moral standards. People are encouraged to act with honesty, integrity, and respect towards others, while also promoting individual autonomy and self-expression. There is also a growing awareness of the importance of social responsibility and sustainability in ethical decision-making.

Overall, these answers are based on a general understanding of modern society and may differ depending on personal beliefs, cultural background, and other factors.
