

If Alexander the Great had died in his first battle, it would have been impossible for the Hellenistic World to come into being. This would have had a huge impact on the Age of Empires, as the spread of Greek culture and language, which had a large influence on the region, would not have occurred. Without Alexander's conquests, the political and cultural landscape of the Mediterranean would have been drastically different. This would have had a profound effect on the world as a whole. (Schwartz & Gatto, 2011; Wrightson, 2019)

The political and cultural landscape of the region would have been very different without the influence of Alexander's conquests. The Roman Empire may not have risen to the same level of power and influence without the Hellenistic World, as the Greek culture and language would not have been spread throughout the region ("Greek in the Hellenistic World and the Roman Empire," 1983). This includes the rise of Rome and its impact on the Mediterranean region. Without Alexander's legacy, the political, social, and cultural landscapes of the Mediterranean region would have been much different, as the spread of Greek language and culture would not have taken place ("Alexander the Great," 2019). The Hellenistic World was an important part of the Mediterranean region's history, and its influence would have been drastically different without Alexander's conquests.

Additionally, the political and cultural landscape of the region would have been very different without the influence of Alexander's conquests. This includes the rise of Rome and its impact on the

Mediterranean region. Without Alexander's legacy, the political, social, and cultural landscapes of the Mediterranean region would have been much different, as the spread of Greek language and culture would not have taken place ("Alexander the Great," 2019). The Hellenistic World was an important part of the Mediterranean region's history, and its influence would have been drastically different without Alexander's conquests.

Without Alexander's conquests, the world would have been a very different place. The Age of Empires would have been much different, and the political and cultural landscape of the region would have been different. Additionally, the spread of Greek culture and language, which was a major influence in the Mediterranean region, would not have occurred. This would have had a profound effect on the region and the world as a whole. (Schwartz & Gatto, 2011)

In conclusion, it is clear that if Alexander the Great had died in his first battle, the history of the world would have been drastically different. The Hellenistic World, which was established by Alexander's conquests of Persia would never have ever come to be. This would have had a profound effect on the Age of Empires, as the spread of Greek culture and language, which was a major influence in the Mediterranean region, would not have occurred. Without Alexander's conquests, the world would have been a very different place.(Wrightson, 2019).
