10 Point Response

Level vs. Loudness

Sometimes when we download a song, we realize how its level is low even when we press the volume button to 100%. We want it to be loud so that the entire neighborhood will hear what we listen to, but we cannot expect everyone to experience the same type of loudness as us. As was mentioned in the video, the level is not loudness; they are like relatives and complement each other. While we can increase or decrease the level of a song or a radio, the loudness is something different; it is like it is in our mind; we can hear something very loudly when someone else says it is low. It is an interesting subject in music that deserves more talk because we believe that volume makes something loud.
