

1820

No technology

No way to tell time (solar cycle)

Agriculture

Horse if you were rich

Wash cloths by hand

Cook over fire

1920

Change of work (factories, shops, transportation, mining)

Cars

Radios

Refrigerator

Airplane

Weapons

Measure time by minutes

Factory machines that made life easier

The basic changes from 1820 to 1920 were huge. These changes consumed change of technology. For example only the rich or lucky had a horse which made carrying when traveling so much easier. In 1920 the use of horses slowed down because of the invention of cars. Another change was refrigeration making food cleaner and healthier. Some of the huge changes were jobs, so instead of working in agriculture all day new jobs like factories, shops, transportation, and mining. In 1920 they developed a way to tell time, weapons, and factory machines that made work a lot easier. New social groups during this time would be unions who came together to solve the problems of beings not getting work due to machines. Different groups of workers formed together to wreck machines and boycott factories. I see the industrial revolution as a change of life.
