Personal Project - Database Designs

The database I am creating will be a movie finder database that can help people find movies to watch when they can't decide what to watch. They will be able to search by the title, actor, director, studio and the ratings of the movie. You will be able to search for the actors and directors by their last name and date of birth. You can also watch a movie from a certain movie production company such as Warner Bros and Lions Gate. Most of the tables besides the movie table will have a limit amount of rows. The Movie table will call the other tables for its information.
