Asa Hunte

Capstone 1

Alliance University

February entry:

Week 1

I'm feeling a bit underprepared for this class now. Especially since I was assigned to the programming section of the course. Ok, for the most part, I just need to do my best to contribute to the project and do more than the last Capstone class.

Week 2

Professor assigned me and Enosh to the html side of things which will deal with the front-end section. The front-end section is basically how the app will look but thankfully, I feel a lot more comfortable with this since I understood a decent amount of this in the webpage design class last semester. This is looking up.

Week 3

This is the third week of class and I still haven't gotten around to watching the videos the professor recommended to me yet! Professor also recommended a website called bootstrap to practice the coding we will be doing so I'm going to have to get on that as well. Karinna was checking in on us to make sure we were meeting but me and Enosh hadn't gotten around to properly scheduling a meeting to talk over the things we have to do. I think we should be able to work something out soon on Slack though.

Week 4

I finally made some progress in understanding what we're doing! I was able to meet up with Enosh a few times before the next class and Enosh helped me get a grip on the html section we would be working on together. Turns out, I needed a skeleton file to properly experiment with the bootstrap code. Enosh was a huge help here as he sent me the skeleton file and we talked

over stuff we were doing on the coding section. Enosh told me he was trying to figure out how to center the content which made me think of an exercise Professor Nevill did with my class in Webpage Design but I couldn't find the file. We just decided to ask Professor Nevill about it in class later. I'm definitely not just going to get carried again.
