

**NURSING CARE PLAN**

Student's Name: Christie Benoit

Nursing Diagnosis: ~~Risk for hyperbilirubinemia~~ — this is the P —

Patient's Initials:

P – Risk for hyperbilirubinemia P — ~~?????~~ —

\_\_\_\_\_ Date

E

Admitting Diagnosis:

S ??? —

**Expected Outcomes  
Evaluations**

**Nursing Interventions**

**Rationales**

<p><u>The The</u> Neonate Bilirubin level is less than 12 <u>at 09:05AMtime</u> <u>frame</u></p>	<p>1. <del>Check</del> <u>Assess</u> <del>Assess</del> for jaundice every shift 2. Check serum bilirubin level <u>every 6 to 12 hours</u> <u>when?</u> 3. Educate parents to feed baby every 2-3 hours 4. <u>monitor</u> Strict I/O <u>action?</u> <u>Monitor</u> 5. <u>Assess infant for neurological involvement</u> <u>Monitor neonates skin every 2 hour this is opposite to intervention #1</u> 6. Provide education for patient <u>regarding care for neonate with jaundice what education? Be specific</u></p>	<p>1. determining <u>it if the bilirubin level is high by lighting</u> <u>pressing on the center of forehead/nose</u> 2. provide an understanding that High Bilirubin can lead <u>brain damage health complication and might be a sign of liver damage not liver damage for newborn</u> 3. Decreases the incidence of hyperbilirubinemia <u>by helping neonate eliminate bilirubin how?</u> 4. excrete bilirubin through <u>their urine and feces not urie</u> 5. <u>look for signs of lethargy and seizures</u> <del>To determine yellowing of the skin by lightly pressing on nose of neonate this is not the rationale</del> 6. <u>Identify symptoms of jaundice include refusal to suckle on breast and no stool for 48 hours. To inform parents to observe signs of jaundice and the importance of breastfeeding their infant 2-3 hours this is not the rationale. Same as intervention #3</u></p>	<p><u>Goal met. The Goal met.</u> Neonate Serum Bilirubin level is 6.2 <u>At 1500Time frame</u></p>
