Research and Writing Assignment

1. Smartphone: The components of a smartphone, such as the screen, camera, processor, and memory, are manufactured in various countries around the world. These components are then shipped to a factory where they are assembled into a phone, which is then shipped to a warehouse and distributed to stores or directly to customers. The entire process involves numerous network connections, including transportation and communication networks.
2. The coffee beans are grown in countries such as Colombia, Brazil, or Ethiopia, and then shipped to a roasting facility. The roasted coffee is then packaged and shipped to stores or directly to customers. The process involves transportation and communication networks, including shipping, trucking, and online ordering.
3. Clothing: Clothing is often made in countries such as China, Bangladesh, or Vietnam, and then shipped to stores or warehouses. The process involves transportation and communication networks, including shipping, trucking, and online ordering.
4. Furniture: Furniture is often manufactured in countries such as China or Vietnam, and then shipped to stores or warehouses. The process involves transportation and communication networks, including shipping, trucking, and online ordering.
5. Television: Televisions are often manufactured in countries such as Japan, Korea, or China, and then shipped to stores or warehouses. The process involves transportation and communication networks, including shipping, trucking, and online ordering.
6. Food delivery: Food delivery services such as Uber Eats or GrubHub rely on networks of drivers, restaurants, and customers. Orders are placed through a mobile app, which communicates with drivers, restaurants, and customers to coordinate delivery. The process involves communication and transportation networks, including mobile networks, GPS, and online ordering platforms.
