

### Document Assignment

1. Document Carl Shapiro's cardiac rhythms that occurred in the scenario.
  - a. During the scenario, Carl Shapiro experienced Ventricular Fibrillation which caused him to become unresponsive.
2. Document the changes in Carl Shapiro's vital signs throughout the scenario.
  - a. During the scenario, Mr. Shapiro's heart rate began to rise rapidly. His face expression began to change and the rhythm on the EKG changed from Normal Sinus Rhythm to ventricular Fibrillation. The patient's SpO2 levels began to deteriorate, and the patient became unconscious. The patient also did not have a pulse when assessed.
3. Identify and document key nursing diagnoses for Carl Shapiro.
  - a. The patient is at risk for injury secondary to unconsciousness. The patient is also experiencing a decrease in cardiac output related to altered electrical conduction.
4. Referring to your feedback log, document the assessment findings and nursing care you provided.
  - a. The patient began to lose conscious. The carotid pulse was assessed, and the patient was checked for any form of responsiveness. A code was initiated, and CPR was preformed when the patient showed no sign of responsiveness. A defibrillator was used on the patient.
