Network connection brings about positive and negative impact in my life. International connections brought a positive impact in terms of the availability of variety of goods. An example are shoes and clothes that I wear daily. Nike Shoes are mainly manufactured from China and Vietnam which is then transported to Nike distribution center like Memphis (The Ohio State University). My H&M clothes are manufactured from Bangladesh that undergoes raw material production, component production and processing, product manufacture, repacking in warehouses and delivery to distribution centers (H&M Group). Network connection also made my breakfast better. The Union Greek Yogurt I eat are manufactured from Morwell, Victoria in Australia (Farmer's Union). The delicious Nutella I spread over my toast are manufactured in Italy. Its cocoa came from Nigeria, palm oil from Malaysia, sugar from Brazil, and hazelnut from Turkey (Fishbein, 2013). My Starbucks coffee are made from coffee grounds acquired from Latin American plantations (Starbucks). The production of Colgate toothpaste that I use when I brush my teeth takes place in several plants in US like Tennessee and Ohio (Madefind, 2021). On the other hand, the negative effect of network connections passively influence my life. The greenhouse gases produced by transporting the goods that I enjoy contributes to climate change. If nothing changes, this negative impact on the environment will not be a passive impact to my life anymore.
