Gupta Empire

The four things that I had learned from watching this short film was number one, the king governs without capital punishment. I found that interesting because usually punishments are motives to make sure people follow the law, so the Gupta empire did not have to rely on punishments- shows how peaceful they are. Second, is their technological advancements like the 35 foot iron pillar from 400 AD, which is standing till this day. Third, the Gupta were skilled mathematicians. They pioneered the use of zero and developed pie (3.14...). Lastly is Arya. He was an astronomer who proved that earth went around the sun in 500 AD.
