

Due Date: 4/1/23

Overview

Please assess the dynamics of your group this week.

1. Do you find that group members have settled into 'patterns' of interaction and participation in the group? Are there group members who are more active in the group than others?

I don't really think that our group has fallen into a pattern of interaction and participation within the group. Each time we meet the topic of discussion is different and there is a different member of the group that will come with more informative information than the other participants, but each person does hold their weight within the group. There is no other particular group member more active than the others all participants engage and present information that can help the group move forward.

2. Do some group members have limited participation? What do you think might be happening here?

To be honest there's no one particular group member with limited participation within novel group. Each person participates and gives their opinion and feelings and regards to the topic at the moment being presented.

3. What was your own level of participation in the group process this week?

My own level of participation in the group this week was to gather information for my portion of the community assessment. As a group we broken down the community assessment assignment and regards to each section that we presented in the group assignment. Researching the information that I found in regard to my portion and presenting it to the group so we can then figure out how to gather the information for our presentation.
