

Yessireth Fernandez

Week 3 Assignment

Summary Part B

1. What is your population of interest?

- my population of interest would be workers between 18-65 years of age who have worked in the hospital and/or their department for over 3 years. I am choosing this wide range of age because there are so many generations at the hospital. The idea is just to gather what they feel about ethical leadership. I am more focused with the time in hat they have at the job as opposed to their age.

2. What is your estimated sample size?

-My estimated sample size will be 100 people

3. How well do you think your results will generalize to other groups, companies, etc.

-I think my results will generalize well with other groups or companies because since I work in a hospital, this is already a general place that can give perspectives on other companies or hospitals.

4. What are potential lurking variables?

-Some potential lurking variables I feel I may have will be the perspective someone may have of what ethical leadership is. Some may think that what I am identifying as ethical leadership is not really a deal breaker for them or vice versa.

5. What confuses you the most about writing your thesis?

-What confuses me the most about writing my thesis is a connecting theory. I have yet defined it and I am having difficulty understanding exactly what it is.
