

Watch the film on **Global Warming** and then address at least two of the following questions:

1) What are some of the major environmental problems documented in this film?

Greenhouse effect, pollution, how humans affect global warming and how we play a huge role, factories and gasses being released in the air daily bases. I also learned about the heat beams/waves heating areas like new york where there is more concrete than green causing city people to be more at risk with heat.

4) What are some of the long-term dangers projected in the film? What can be done to stop this danger?

Increase of heat waves, decrease of water resources, rising sea levels, drought, storms

Car changes, they are reducing carbon emissions and using low polluting diesel fuel in trucks and heavy equipment. They are working on producing their own power for example with wind power which can produce electricity. Solar energy.
