Principles of Research Methods

Pro. NICHOLAS BOWERSOX

Summary Part B

1. What is your population of interest?

My population of interest will be the ATS students of Alliance University.

2. What is your estimated sample size?

I am estimating to survey 20-50 students.

3. How well do you think your results will generalize to other groups, companies, etc.

The results that will come from paper and survey I believe will have a great impact on other people and companies because we are living in a time where leadership is not the same the way it used to be.

4. What are potential lurking variables?

The potential lurking variables may be gender, and race/ethnicity.

5. What confuses you the most about writing your thesis?

The only thing that confuses me is the structure of the thesis template.
