“Humans”

Humans throughout history have been seen asking themselves the same question, "What is a Human?" However, because of this “simple question” and some “simple answers' ' major consequences in History have occurred. Slaves have existed for centuries before it came to America, but cruel brutality and hatred began when the whites believed they were a superior race. Is a criminal still a human? Or are armies still human? Growing up, I have seen multiple cold blooded shootings and murders.. They too are still human, but when they committed that act of killing I believe their view on humans had shifted to something more less than reality.
