PBS Global Warming

1) What are some of the major environmental problems documented in this film?

- The ice covers in the Arctic and Antarctica are melting as a result of rising temperatures.
- Agricultural productivity is unstable as a result of shifting atmospheric circulation.
- Areas that are prone to drought will get drier
- More precipitation will fall in flood-prone areas.

4) What are some of the long-term dangers projected in the film? What can be done to stop this danger?

- Among the long-term risks are:
 - a) more often occurring droughts
 - b) increased sea levels
 - c) migration of tropical diseases poleward
 - d) The frequency of extreme weather is rising.
- Things we can do to eliminate the threat:
 - a) Wind Energy
 - b) Hybrid Biodiesel Technology
 - c) Energy-Efficient Houses
 - d) Hybrid agriculture and crops
