There are many recorded moments of Disruptions of society which the two I will be discussing are one Covid and 9/11 which both events changed the whole landscape of how we saw things. So to start I'm gonna talk about the event that happened years before covid which was 9/11, an event that occurred in lower manhattan New York which involved two planes crashing into the Twin towers which were the tallest buildings in New York at the time. After this happened and finding out that a group named Al Qaeda organized these loads of racism towards Muslims would start to spike in the United States because of fear that was struck into everyone in the states at this time. There was a huge unity in the United States after 9/11 but equally a big division because some of the people just chose to be racist because they were afraid of this happening again but being racist isn't the way ever. This was the first big moment of disruption I got to witness, well the aftermath is what I mean.

The other example of Disruptions of society which was recent is covid. Covid is a respiratory disease that was found in Wuhan China that killed billions of people and is still counting. When Covid 19 first hit I saw a bunch of people willing to stay inside like W.H.O told the whole world to do so we can lower the chances of more cases but people who didn't believe

that the virus existed decided to not listen where there was unity because everyone came together to go against the people who believed in this. There was also a lot of division because since the virus was from China a lot of people who were Asian were being beaten up just because they were Asian, that itself brought people together to make a "Stop Asian hate" movement. Today America is handling the COVID virus pretty well because Infection rates are decreasing by the second. Both Covid and 9/11 split people apart but I feel these Disruptions of society split people to bring them back together stronger.
