

Dear Ladies and Gentlemen,

find your passion and you'll never have to work again. I immediately had to think of this wisdom when I took a closer look at Robert Bosch GmbH. My decision to study mechatronics while experiencing practical applications of my studies was made quickly because it allows me to work on projects for the future and to create something new more efficiently. Being part of such a large force of the future, but still not just being a number in the system, is my dream and connects me with the values of the company.

At the moment, I'm in the last year of my bachelor studies and I will finish my B.S. in Business Administration with a concentration in Management in Spring 2024. I look forward to continue learning and studying to increase my knowledge and ability to make a difference. I have also been a passionate basketball player since I was five years old. Through many years of experience in team sports, including playing Basketball at the collegiate level, I have demonstrated qualities such as teamwork, determination, and resilience under pressure to perform at the highest level. Additionally, the ability to achieve at both sports and studies have shown that I can handle the time pressure and I'm disciplined in structuring my life. I work focused on my athletic development, which I want to transfer to my professional development. This is exactly where I see my strengths, in addition to a very quick comprehension and a very good technical understanding. My great interest in the field of mechatronics was awakened by my internship in project management at AKKA GmbH. I chose the dual study path because the combination of theoretical content and direct practical application particularly appeals to me. In the months that followed, my wish was strengthened at the Horizon job fair, at the open day at the DHBW, and at the school's career information event.

I would very much like to start my dual studies in the field of mechatronics as part of this highly innovative company. I would like to start my career at Robert Bosch GmbH with an interview and look forward to discuss my resume in person.

With sporty regards

Nik Schlipf

Companies in Germany offer dual studies (Bachelors/Masters). This means being employed as a worker while the company is paying for your education and work at the same time. This is extremely demanding because the contents you study are the same as the students who study full time. The appeal for the students/applicants is to experience the practical side of the studies as well and for the employer it is an fully educated and prepared employee once the studies are finished. This is a huge advantage career-wise as well since you have demonstrated the ability to handle the immense workload of working and studying at the same time. The sponsorship of the company also means that you are of special value to them since they have invested money and time in educating you and they'll make sure to get an return on their investment in terms of making sure you'll have the chances to rise up in the company and contribute to its success.
