I think Lise's character is believable and I think this short film is like a 15-year-old girl. The story is very interesting. It starts with the protagonist's birthday. Description Describes the girl's inner activities in detail. In the chat with her mother, she tells the reader what kind of clothes the girl wants to wear on that day and where to celebrate her birthday. Next, she received her mother's first birthday gift, a chemical building block, and it was still a very interesting puzzle. Then her mother's words led to the following: The relationship between the girl and her father seemed to be not good. The father abandoned their mother and daughter for 10 years. From her mother's words, it can be seen whether there was something difficult for her. There is no explanation for exactly what happened. Then The second birthday gift my mother gave to the girl was a beautiful necklace. She smiled happily. My mother wanted to say something and wanted to tell the girl something, but she didn't say anything. I always felt that my mother was very Mysterious.

Finally, there is the most unconstrained part of the robot in the full text. That's why I think this novel seems to be written by a 15-year-old girl, because they are active and bold at this age. Here is a description of their mother-child fight with robots and the girl's series of inner activities, fear and shock. Seeing this, I think the girl wants to attack through a robot. Their mother and daughter told the reader something about it. Later, the father appeared and the mother was destroyed by the robot.

After reading this article, it always gives people a faint sadness. It seems that the author's heart is very depressed. This is my little feeling.
