During this week we had the pediatric health fair presentation at the corner christian school in Nyack. It was a great opportunity to present prevalent health topics from grades UPK-8th grade. It was very interesting to go teach these topics to the students, I had UPK-2nd graders. It was much different than I expected, it was hard to control such a big group of students with many distractions. We had to teach dental hygiene. It was sometimes hard to engage the students in activities because they have such a short attention span. Me and my partner brought in a teeth model and brush model to show them how to properly brush their teeth. We also got them goodie bags, so they can use some toothbrushes at home and floss. One of my greatest accomplishments at this health fair was being able to teach the kids the importance of dental hygiene and being able to demonstrate to them the proper way of brushing their teeth. One challenge I had was that, it was hard to maintain control of the kids since everyone is at different ages, and have different personalities towards the subject. Also some of the students had behavioral/ developmental issues such as low spectrum autism or ADHD which made it harder for the student and other students to properly engage in the activity. Overall it was a great experience, and I had a great time teaching and showing them the importance of dental hygiene. One of the bible verses that was brought to my attention this week and during clinical was “Whatever you do, work at it with all your heart, as working for the Lord, not for men” Colossians 3:22.
