Music Business

10-point Response

5/2/2023

This video touches on basic advice on starting a career in the music business. I like how the speaker starts by asking why do you want to join the industry. A person shouldn't enter into the music industry with the main intent to make money. Making music is not just about one thing, it is an industry. He also states to find your influences and learn those songs so well that you claim to be an influence. It is important to have the people that inspire you to be in your spirit, because they take a natural course and come out in one's life. It is also important to surround yourself with other people that will support you and your work.
