

Nursing Informatics Quiz (post ATI modules) Week 2

Name: Griselda Aguilar-Lopez

Date: 9/9/2020

Student #1

1. Nurse Raye logs into a hospital computer for client information when a PCA (patient care assistant) asks to chart an urgent abnormal vital sign. How should Raye proceed?

- a. Let the PCA quickly enter the vital sign while Raye is logged on.
- b. Log off the computer so the PCA can sign on and enter the information.
- c. Inform the PCA to write the vital sign down and find another computer to use.

2. Nurse Lee maintains an online blog to share experience & knowledge with others. Which of the following demonstrates an understanding of HIPAA?

- a. If Lee posts questionable client information, there is a 30-minute timeline to safely remove it.
- b. Lee can post anything as long as real names are not used.
- c. General statements regarding care practices cannot contain client specific information.

3. Nurse Cooper is gathering patient information on the computer and notices a good friend is listed as a patient on the unit. What action should Nurse Cooper take?

- a. Disregard that the friend is a patient there.
- b. Inform colleagues a patient on the unit is a good friend and deserves special treatment.
- c. Visit the friend and ask if they need anything.

4. Virtual Social Networks are helpful for clients as a way to ... (choose all that apply):

- a. meet others experiencing similar health related challenges and obtain personal care "tips"
- b. avoid supportive family & friends who might not understand compromised health challenges.
- c. share detailed private healthcare information with strangers in an attempt to find a cure.

5. Nurse Tony is using a WOW (workstation on wheels) going room-to-room assessing patients. What is the best practice to assure confidentiality?

- a. completely log-off the WOW between patients
- b. move the WOW into the next clients room while finishing charting to save time
- c. sign-off the patient-specific screen before leaving the room
