*A Wrinkle in Time*

*A Wrinkle in Time* by Madeleine L'Engle is a story of three friends who travel through time & space to save Meg and Charlie's dad Alex. Charles is really smart for his age as well as being able to sense Meg and his mom if they're stressed or scared. Meg is paranoid and thinks outside the box but is protective of Charles. Their friend Calvin isn't scared to get along with others as well; he's tall and athletic. They were able to travel through time and space to get to other worlds in search for Alex.

If I named the book it would probably be called *A Winkle Through Time*. The way they traveled is called wrinkling; henceforth *A Wrinkle in Time*, but they didn't go in time but through time". We don't travel at the speed of anything, Mrs. Whatsit explained earnestly, we tesser or you might say we wrinkle "(70). Alex worked for the government, and he helped make a machine they called a tesseract, which let them wrinkle one person to a random planet once a year. So wrinkling is cutting the gap of the distances too basically nothing.

In the weird world that they were wrinkled to, all the residents were acting strangely in sync and organized. An entity rules the perfect town, but everyone is brainwashed by the entity they call It. It tried to brainwash Charles, but It didn't have to try because he thought he could get the information about Alex and then get out". You must do as I have done and go into It said Charles "(162). So now the controlled Charles is leading Meg and Calvin to Alex who was in a cage.

Meg didn't trust anyone who lived in the weird town; she was paranoid and protective of Calvin but super protective of Charles. But Meg began to trust more people and things after they fled the planet. but they went through a black cloud and got Meg to have a deadly virus. But on the planet they had fled to, the alien residents were blind and oddly fluffy with tentacles for arms. but the aliens knew how to cure Meg's vires, so she had to trust the fluffy aliens. The Alien asks are you warm and alive again? Yes I'm fine said Meg (198). So Meg had gotten better at trusting people after she got back to earth.

Meg, Charles, and Calvin traveled though time and space to find Alex. Whenever they entered the town, run by "It," it confused me and them for all the residents were perfectly in sync. At the end of the book, they go back to normal like not much happened. If I had ended the book, I would have made Alex go to the government to tell them to no longer start the tesseract. So, traveling through time and space can be safe but most of the time it's dangerous.
