

Methods of STEM --- Mid term Survey

1. What is the most valuable aspect of the course for you so far (i.e. Nature of Science, 5E learning model, readings and discussion, engineering design, maker spaces, DOK, assessment, lesson planning, cultural relevance, etc.)

The most valuable aspect of the course would have to be reading the online discussion board, I learned so much from the participants that I will be able to bring back to my classroom/school. Also, the 5E learning model it was great reading the plans that the participants posted.

2. Name something that you wish there was more time to explore.

I wish we had more time on the maker spaces, I enjoyed the discussion and the speaker. After the session I went to work the next day and no one had heard of it. My supervisors want to bring it to our campus, I would like more information in how to implement.
