I joined this program back in January 2018, and I decided to enroll as a joint master's degree student with Adams State University. Back in 2017, I was debating with myself whether to pursue a M.Ed. Leadership program or M.A. Curriculum/Instruction, but when I discovered this NASA Endeavor Teaching project, I made my decision right way.

I am less than a month from completing the program, and I feel so happy and proud that I made that decision three years ago.

When I started this program, I was a classroom science teacher, and we were, as practicing educators, encouraged and also required to use all the available Endeavor and NASA resources in our instruction. I made tremendous use of those resources. All those activities were very simple to implement, and we had fun in the classroom. Most importantly, students were highly engaged, and we were able to accomplish our learning goals.

I was promoted to the administration at the end of 2018-2019 school year. Now I am going into the second year in the administration. As a STEM instructional leader and curriculum/instruction coach, I heavily rely on NASA and Endeavor resources to support our teachers and students. Since I've used this resources myself as a teacher, I encourage teachers to use as well. These resources are very cost-effective, engaging, and standard-aligned with state standards.

One of the significant things that I learned through NASA Endeavor courses was designing a highly effective 5-E lesson plan. As a science teacher, I used this in designing all my lessons, and now as a science coach, I ensure that teachers are designing their lessons plans by incorporating the elements of this model.

This program certainly gave me a lot of knowledge and skills needed to become an effective STEM instructional leader and educator.

I will be forever grateful to all my professors, mentors, advisors, and administrators at NASA Endeavor.
