

I am excited to be guiding future engineers, innovators, and scientists! We are Developing the love for learning while promoting skills of the twenty-first century. Our students are LOVING exploration of Science and Engineering through hands on and authentic lessons. Following the @NASAPerserve Mars Rover landing, we continue gaining knowledge by scientific observations and collecting evidence. Learning about the Nature of Science and becoming critical thinkers and engineers of solutions. Continuing to teach excellence through our exploration and “Teaching kids to be producers of technology not consumers.” Miss de
