Lessons from the Ocean: Science on the Water Planet

Dr. Meghan Marrero

One of the Mini Labs that I chose was “Mapping the Ocean.” It was a really cool activity to know what it is like to map the floor ocean. This mini lab included math and graphing so it really does give the learner the visual to see the different depths of the ocean. I found the lesson to be very useful when teaching geography. It allows the learner to really think about how some parts of the ocean were not always under water. This lesson really does have many opportunities to learn about how large the ocean is and that there is so much more we do not know about the ocean.
