

Hey science teachers, need a little *light* in your unit planning? Check out this awesome activity on light spectroscopy from NASA's Jet Propulsion Laboratory (JPL): [Using Light to Study Planets](#). As part of the Endeavor STEM Teaching Certificate Project, I had the opportunity to hone my teacher leadership skills this semester by developing a PD training centered around spectroscopy. I incorporated this hands-on, classroom-ready activity to build spectrometers with nothing more than a cereal box and a compact disc (CD)! (Yes folks, you read that right!!) You can find this activity and more *illuminating* resources on [JPL'S Teach website!](#)

I give Endeavor STEM Teaching Certificate Project permission to post this content on their social media pages.”
