

Hello Christine,

This is how I felt after watching your first live session video...

There are simply so many resources to investigate, ideas to ponder, and space to explore! It's intimidating and invigorating at the same time! I'm really amazed by your accomplishments in the field! And oh, how I'd love to do the Einstein Fellowship! I understand and appreciate the vital role government plays in education and share your enthusiasm for spiraling an earth-space curriculum, as well as building a firm foundation in the elementary school years. Lastly, in addition to teaching STEM, I'm an activist and have a deep interest in advancing social and environmental justice. As an environmental major, I always wanted to help save the world. Circumstances ultimately led me down the teaching path. But I still believe I am helping to save the planet (or perhaps more appropriately, the human

species) by instilling in my students a love and respect for science. Thanks again for all your patience and support!
